

ClickUp Health - Scoring Worksheet

This worksheet defines how the Health Score is calculated. Each row is a signal the scan can measure. We have pre-filled a sensible default weight and threshold - keep it, or change the value. Tick N/A for any signal you do not want scored.

API column: Yes = measurable today Part = partial / conditional No = not exposed by the ClickUp API (reference only).

A. Overall model

Score: 0-100. Grades: A = 85+ B 75-84 C 60-74 D 45-59 F under 45.

Severity levels: Critical / High / Medium / Low / Opportunity.

B. Category weights (should total 100%)

1. Architecture & Structure	15	%
2. Workflow Design	15	%
3. Data & Governance	15	%
4. Operational Health	20	%
5. Adoption & Activity	15	%
6. Platform Utilisation	10	%
7. Reporting Readiness	10	%

C. Signals per category

1. Architecture & Structure

weight 15%

Signal	API	Weight	Threshold	Severity	N/A
Avg tasks per List	Yes	15	< 10 (median)	Low	☐
Dormant Lists (no activity)	Yes	30	> 20% of Lists	Medium	☐
Fragmented Lists (< 5 tasks)	Yes	35	> 25% of Lists	Medium	☐
Hierarchy / folder sprawl	Yes	20	> 20% empty Folders	Low	☐

2. Workflow Design

weight 15%

Signal	API	Weight	Threshold	Severity	N/A
Statuses per Space	Yes	25	> 12 per workflow	Low	☐
Unused statuses	Yes	25	> 3 per workflow	Medium	☐
Duplicate status names	Yes	20	same name, diff type	Medium	☐
Avg time in a status	Part	30	> 14d in active status	Medium	☐

3. Data & Governance

weight 15%

Signal	API	Weight	Threshold	Severity	N/A
Custom Field count (bloat)	Yes	20	> 100 fields	Low	☐

Custom Field completion rate	Yes	35	< 50% where in scope	High	☐
Unused Custom Fields (90d)	Yes	25	0% filled in scope	Medium	☐
Tasks missing key fields	Yes	20	> 20% (required CFs)	Medium	☐

4. Operational Health

weight 20%

Signal	API	Weight	Threshold	Severity	N/A
Overdue task rate	Yes	35	>15% (>30% Critical)	High	☐
Stale tasks (untouched 90d+)	Yes	30	> 20% of open	High	☐
Tasks without a due date	Yes	0	scored in Reporting	Low	☐
Completion vs creation trend	Yes	20	created > done, 3 mo	Medium	☐
Work-in-progress level	Yes	15	> 15 open/person	Low	☐

5. Adoption & Activity

weight 15%

Signal	API	Weight	Threshold	Severity	N/A
Inactive paid seats (30d)	Yes	30	> 15% of members	Medium	☐
Activity concentration	Part	20	> 80% in 1 Space	Low	☐
Comment / update frequency	Yes	20	< 1/active user/week	Low	☐
Dormant Spaces	Yes	30	any (after exclusions)	Medium	☐

6. Platform Utilisation

weight 10%

Signal	API	Weight	Threshold	Severity	N/A
Time tracking in use	Yes	35	0 logged in 90d	Opportunity	☐
Estimate coverage	Yes	0	scored in Reporting	Low	☐
Views / Dashboards used	Yes	30	< 2 Views per Space	Low	☐
Dependencies / Relationships	Yes	35	none used	Low	☐
Goals tracked	Yes	0	insight only	Opportunity	☐
Docs used	Yes	0	insight only	Opportunity	☐
Custom Task Types used	Yes	0	insight only	Opportunity	☐
Automations / Forms / Whiteboards / Wor...	No		not measurable		☐

7. Reporting Readiness

weight 10%

Signal	API	Weight	Threshold	Severity	N/A
Due-date coverage	Yes	30	< 80% of open tasks	High	☐

Ownership (assignee) coverage	Yes 30	< 80% of open tasks	High	☐
Estimate coverage	Yes 20	< 40% of open tasks	Medium	☐
Consistent statuses / workflow	Yes 20	> 5 distinct workflows	Medium	☐

D. Global definitions (change any you wish)

Overdue	Past due, not Done/Closed	past due date, not closed
Stale	90 days (no task update)	open, no update for N days
Dormant List	90 days	no task activity for N days
Fragmented List	< 5 open tasks	fewer than N active tasks
Active user	30 days (task/comment activity)	created / completed / commented

E. A few questions

Any category you want weighted more or less than above?

Category weights are fine as they are, with Operational Health highest at 20%. Signal weights are adjusted to remove double-counting: due-date and estimate coverage are now scored once, in Reporting Readiness only. Note the original Platform Utilisation signal weights totalled 95%, now corrected to 100%. Opportunity-severity findings should carry little or no score penalty.

Overdue threshold - right, or should it be stricter / looser?

Keep 15% but tier it: over 15% = High, over 30% = Critical. Overdue must mean due date passed and status is not a Done OR Closed type (not just Closed). Exclude archived tasks and anything in excluded Spaces. The 15% in section D was a threshold, not a definition, so I have replaced it.

Platform Utilisation: count toward the score, or show as insights only?

Count toward the score at 10%, but only Time tracking, Views and Dependencies/Relationships. Goals, Docs and Custom Task Types = insights only (show as Opportunity findings, no score impact). Dashboards, Automations, Whiteboards, Integrations, AI and Workload capacity are not exposed by the public API: show as 'not measured' and never penalise.

Any signals you would add or drop?

Add: guest vs member ratio; open subtasks under closed parents; scan-coverage warning if the connecting user is not Owner/Admin. Rename 'Inactive paid seats' to 'Inactive members' and mark it Part: the API shows roles not billing, and activity is inferred from tasks/comments, not logins. Comment frequency needs per-task calls, so sample on large workspaces. Time in status requires the Time in Status ClickApp. 'Unused CFs (90d)' is now '0% filled' as value-change dates are not exposed.

Once complete, return this worksheet and we will configure the scoring engine to match.
