

ClickUp Health - Scoring Worksheet

This worksheet defines how the Health Score is calculated. Each row is a signal the scan can measure. We have pre-filled a sensible default weight and threshold - keep it, or change the value. Tick N/A for any signal you do not want scored.

API column: Yes = measurable today Part = partial / conditional No = not exposed by the ClickUp API (reference only).

A. Overall model

Score: 0-100. Grades: A = 85+ B 75-84 C 60-74 D 45-59 F under 45.

Severity levels: Critical / High / Medium / Low / Opportunity.

B. Category weights (should total 100%)

1. Architecture & Structure	15	%
2. Workflow Design	15	%
3. Data & Governance	15	%
4. Operational Health	20	%
5. Adoption & Activity	15	%
6. Platform Utilisation	10	%
7. Reporting Readiness	10	%

C. Signals per category

1. Architecture & Structure

weight 15%

Signal	API	Weight	Threshold	Severity	N/A
Avg tasks per List	Yes	30	< 10 tasks	High	☐
Dormant Lists (no activity)	Yes	25	> 15% of Lists	Medium	☐
Fragmented Lists (< 5 tasks)	Yes	25	> 20% of Lists	High	☐
Hierarchy / folder sprawl	Yes	20	> 20% unused	Low	☐

2. Workflow Design

weight 15%

Signal	API	Weight	Threshold	Severity	N/A
Statuses per Space	Yes	30	> 10 per Space	Medium	☐
Unused statuses	Yes	30	> 3 unused	High	☐
Duplicate status names	Yes	20	any clear dupe	Medium	☐
Avg time in a status	Part	20	> 14 days	Medium	☐

3. Data & Governance

weight 15%

Signal	API	Weight	Threshold	Severity	N/A
Custom Field count (bloat)	Yes	25	> 100 fields	Medium	☐

Custom Field completion rate	Yes	30	< 60% average	High	☐
Unused Custom Fields (90d)	Yes	25	> 20% unused	High	☐
Tasks missing key fields	Yes	20	> 20%	Medium	☐

4. Operational Health

weight 20%

Signal	API	Weight	Threshold	Severity	N/A
Overdue task rate	Yes	35	> 15%	Critical	☐
Stale tasks (untouched 90d+)	Yes	25	> 5% of open	High	☐
Tasks without a due date	Yes	15	> 20%	Medium	☐
Completion vs creation trend	Yes	15	backlog growing	Medium	☐
Work-in-progress level	Yes	10	> 10 active/person	Low	☐

5. Adoption & Activity

weight 15%

Signal	API	Weight	Threshold	Severity	N/A
Inactive paid seats (30d)	Yes	35	> 3 seats	Opportunity	☐
Activity concentration	Part	25	> 60% in 1 Space	Medium	☐
Comment / update frequency	Yes	20	low vs team size	Low	☐
Dormant Spaces	Yes	20	any Space	Medium	☐

6. Platform Utilisation

weight 10%

Signal	API	Weight	Threshold	Severity	N/A
Time tracking in use	Yes	20	0 logged	Opportunity	☐
Estimate coverage	Yes	15	< 25%	Low	☐
Views / Dashboards used	Yes	15	< 2 per Space	Low	☐
Dependencies / Relationships	Yes	15	none used	Low	☐
Goals tracked	Yes	10	none	Opportunity	☐
Docs used	Yes	10	none	Opportunity	☐
Custom Task Types used	Yes	10	none	Opportunity	☐
Automations / Forms / Whiteboards / Wor...	No		not measurable		☐

7. Reporting Readiness

weight 10%

Signal	API	Weight	Threshold	Severity	N/A
Due-date coverage	Yes	30	< 80%	High	☐

Ownership (assignee) coverage	Yes	30	< 80%	High	☐
Estimate coverage	Yes	20	< 40%	Medium	☐
Consistent statuses / workflow	Yes	20	inconsistent	Medium	☐

D. Global definitions (change any you wish)

Overdue	15%	past due date, not closed
Stale	90 days	open, no update for N days
Dormant List	90 days	no task activity for N days
Fragmented List	< 5 active tasks	fewer than N active tasks
Active user	30 days	created / completed / commented

E. A few questions

Any category you want weighted more or less than above?

Overdue threshold - right, or should it be stricter / looser?

Platform Utilisation: count toward the score, or show as insights only?

Any signals you would add or drop?

Once complete, return this worksheet and we will configure the scoring engine to match.
