CLICKUP HEALTH SCORE

74 /100

Grade C+

39 findings

This PoC adds the reason behind each score and a clear next step.

Category scores

WHAT THIS POC ADDS

A clear reason behind every score, and an Action Plan that tells the client what to do next.

The score itself is unchanged. This is an explanation and conversion layer on top of the existing report.

INSIDE THIS SAMPLE

01 Why this score
Every category explains its score.

02 Finding targets
Why it is bad and what good looks like.

03 Action Plan
Top five actions and a clear next step.

Why these scores

Each category score is the weighted result of its signals. Below are the signals that are pulling the score down, and what good looks like.

Operational Health

68/100 costing -6.4 overall points

Overdue work is the biggest driver, followed by stale tasks and high WIP.

Overdue rate 31.4% vs < 15% **-4.2 pts**
31.4% of active tasks are past due. Delivery is slipping and the due-date signal cannot be trusted.

Stale 90d+ 12% vs < 5% **-1.6 pts**
A meaningful share of open tasks have not been updated for over 90 days.

WIP / person 19 vs < 15 **-0.6 pts**
People are carrying too many open tasks at once, which slows completion.

Data & Governance

62/100 costing -5.7 overall points

Custom Field sprawl and low completion are the main gaps.

Field completion 43% vs >= 50% **-2.4 pts**
Less than half of in-scope fields are filled, so reporting built on them is unreliable.

Custom Fields 148 vs < 100 **-1.6 pts**
The active field set is too large for the team to maintain consistently.

Fields at 0% 61 vs 0 **-1.4 pts**
61 fields are never used where they apply, adding noise without data.

Architecture & Structure

81/100 costing -2.9 overall points

Mostly healthy, but a long tail of thin Lists is creating clutter.

Fragmented Lists 38% vs < 25% **-2.2 pts**
81 of 214 active Lists contain fewer than five tasks, spreading work too thin.

Dormant Lists 90d+ 11% vs < 5% **-0.7 pts**
23 Lists have had no activity for over 90 days.

Avg tasks / List 66.4 vs >= 10 **within target**
The average List carries a healthy amount of work.

Workflow Design

77/100 costing -3.5 overall points

Mostly consistent, but unused and duplicated statuses add friction.

Unused statuses 9 vs <= 3 **-1.8 pts**
Nine statuses are used on very few tasks, creating choices without tracking value.

Duplicate names 2 vs 0 **-1.2 pts**
The same status name appears with different types, confusing rollups.

Adoption & Activity

79/100 costing -3.2 overall points

Most of the team is active, but quiet members and guest access are dragging the score.

Inactive members 19% vs < 15% **-1.4 pts**
Eight members have had no task or comment activity in 30 days.

Guest ratio 38% vs < 30% **-1.1 pts**
A high share of users are guests, which can indicate an access-governance gap.

Action Plan

Top five actions, ranked deterministically by severity, category weight, share of workspace affected and effort.

	ACTION	EFFORT	IMPACT
1	**Reduce overdue work** Operational Health | Critical | 4,466 tasks	Quick win	High
2	**Retire never-filled fields** Data & Governance | High | 61 fields	Quick win	Medium
3	**Consolidate thin Lists** Architecture | High | 81 Lists	Small project	High
4	**Assign owners** Reporting Readiness | Medium | 731 tasks	Quick win	High
5	**Adopt time tracking** Platform Utilisation | Opportunity | 6% of tasks	Consulting	Medium

QUICK WINS

Reduce overdue work, retire dead fields, assign owners.

Low effort, immediate score lift.

STRATEGIC FIXES

Consolidate thin Lists, adopt time tracking.

Higher effort, larger structural gain.

THE NEXT STEP

Turn the report into a working session.

Walk through the priorities, agree what to fix first, and decide where Sharpflow can help.

HOW THE RANKING WORKS

Severity	How urgent the finding is.	**Category weight**	How much it moves the overall score.
Share affected	How much of the workspace it touches.	**Effort**	Quick win versus larger project.
